EPA is committed to working closely with response agencies and state and local officials to ensure the safety of citizens, respond to concerns and to evaluate impact to water contaminated by the Gold King Mine Release. EPA is sharing information as quickly as possible with the public as experts work to evaluate any effects the spill may have on drinking water, public health, agriculture, fish and wildlife.

Please see our website for the latest information: <http://www2.epa.gov/region8/gold-king-mine-release-emergency-response>

Regular updates will be posted as they are available.

**Subject:** Animas river spill response crew

Hello,

I am attempting to contact region 8 in the Colorado region to discuss an opportunity to help the EPA, wildlife and local residents with the tragic misfortune on the Animas River near Silverton, CO. I am the Project Manager for OMNI Water Solutions and specialize in water cleaning and separate out of solids and unwanted soluble materials in any type of water. We have a very strong track record of water cleaning and have the equipment and capability of cleaning a significant amount of this spill. I would like to be able to deploy ASAP but need to know if this is something we can work out on approvals and or permits. If someone could contact me immediately to discuss options and alternatives to resolving this it would be greatly appreciated. I look forward to hearing from the region. My number is listed below.

Thank You,  
Jordan Muffler
